About VanEck Vectors Steel Index Fund

Market Vectors Steel ETF (the Fund) seeks to replicate as closely as possible the price and yield performance of the NYSE Arca Steel Index (STEEL or the Index) by investing in a portfolio of securities that generally replicates STEEL. STEEL, calculated by the NYSE Alternext, is a modified market capitalization-weighted index consisting of publicly traded companies predominantly involved in the production of steel products or mining and processing of iron ore.

The Index includes companies primarily involved in a variety of activities related to steel production, including the operation of manufacturing mills and fabrication of steel products. Companies eligible for inclusion in Index should be engaged in solar power and related products and services, deriving at least 66% of revenues from it with market cap exceeding \$100 million, and should have three-month trading volume equal to or greater than \$1 million per day. Its investment advisor is Van Eck Associates Corporation.
